

Sustainability Policy

At Victoria Golf Resort & Spa, managed by Accor, we believe excellence is built upon responsibility, respect and long-term vision. Integrated into the unique landscape of the Algarve, the resort is committed to conducting its activity consciously, balancing high standards of service with environmental protection and a positive contribution to the local community.

Our sustainability policy reflects the conviction that every operational decision impacts natural resources, people and the destination in which we operate. For this reason, we adopt practices that promote energy efficiency, responsible water management, waste reduction and the appreciation of local and sustainable suppliers, without ever compromising the comfort, sophistication and quality of the experience offered to our guests.

Guided by the principles of the Accor Group and a continuous improvement approach, we work daily to integrate sustainability into all areas of the resort. This commitment translates into a more conscious reality that respects the present and actively contributes to a more sustainable future.

Our mission is to promote a more conscious management model by continuously improving environmental performance, reducing waste production and optimising energy and water consumption. This commitment is reflected in a set of initiatives already implemented, including:

- 100% non smoking hotel, promoting better indoor air quality
- Responsible procurement policy favouring local and sustainable suppliers as well as eco certified products
- Sustainable food practices in restaurants and bars, using seasonal products, offering vegetarian and vegan options and excluding endangered fish species
- Responsible water management encouraging the reuse of bed linen and towels and using water saving devices on taps
- Reduction of plastic use through the elimination of single use plastics and the adoption of alternatives such as bamboo room keys, glass bottles and Tetra Pack packaging
- Waste minimisation and proper management through selective separation and reduction of disposable packaging

Through these practices, Victoria Golf Resort & Spa, managed by Accor, reinforces its commitment to sustainability, combining environmental protection with the appreciation of the local community.
